**Basic Queue operations and implementation**

Write the codes to the following problems in your preferred programming language:

1. A program implementing the basic operations of Queue i.e. Enqueue, dequeue, front, rear
2. Construct a queue by taking input from the user and reverse it.
3. Implement k queues in an array

These are some very basic and standard questions. The objective of these questions is to make you understand the basics of queues and how to implement it.

The next task will contain questions which are a level higher. So make sure that you do these questions and get your basics right.
